Also described: (1) a method for identifying a compound capable of treating a urological CC disorder; (2) a method for identifying a subject having a urological CC disorder; and (3) a method for treating a subject having a urological CC disorder. The compound has uropathic and cytostatic activities. The CC compound capable of treating a urological disorder in the compound capable of treating a urological disorder. Disorders include urinary incontinence and benign prostatic CC thyong a urological disorder, or treating a subject having a urological conformation. The present sequence represents a human urological disorder crelated protein, which is used in the exemplification of the present

CC cardiant, antiulcer, virucide, antithyroid, cerebroprotective, anorectic, and metabolic. Polypeptides and polynucleotides of the invention are CC useful in the treatment, or as a vaccine in the prevention of, cancer, CC wound healing disorders, infection, atherosclerosis, Parkinson's disease CC and Alzheimer's disease, autoimmune disorder, haematopoletic disorder, inflammation, neoplastic diseases, nervous system related disorders and CC cardiovascular disorders, pancreatitis, respiratory disorder, CC disordership, systemic autoimmune disease, hyper-immunity, CC developmental abnormality, gastrointestinal ulceration, neuropathy, CC disorders e.g. hypothyroidism, brain damages, colitis, cone photo-
CC transduction deficiency, neurological diseases, sperm dysfunction, thyroid culation disorders, diseases in the spinal cord, thyroid gland, heart, crachea, thymus, lymph node and muscular system, obesity, anorexia, CC growth abnormalities, and alleviation of precocious puberty. The CC sequences given in records ABP60965-ABP61019 represent novel human CC proteins of the invention

The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 525
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           14-SEP-2001; 2001JP-00328381.

                    The invention relates to novel diagnostic and therapeutic polynucleotides celected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be CC with human molecules, e.g. cell proliferative disorders associated autoimmune/inflammatory disorder, developmental disorders, or CC disorder, neurological disorders, gastrointestinal disorders, or CC disorder, neurological disorders, gastrointestinal disorders, or CC disorder, neurological disorders, pastrointestinal disorders, or CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide CC gene therapy. The present sequence represents a dithp protein of the CC invention. Note: The sequence data for this patent is not represented in CC the printed specification, but was obtained in electronic format directly XX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New diagnostic and therapeutic polynucleotides and polypeptides, useful in diagnosing a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therapy oin gene mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 27;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Schmidt JP, Wright RJ, Bruns CM, Marjanovic MM, Shen F;

DME is cuseful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. The invention is useful for creating knock-in humanised animals or transgenic animals to model human diseases, in somatic or germline gene therapy, to generate a transcript image of a cissue or cell type, for detecting differences in the chromosomal cocation due to translocation, inversion, etc. among normal, carrier or affected individuals, and as hybridisation probes for mapping naturally occurring genomic sequences. The present sequence is human DME-10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

CC cardiant, antiulcer, virucide, haemostatic, antiparkinsonian, nootropic, cardiant, antiulcer, virucide, antithyroid, cerebroprotective, anorectic, cc cardiant, antiulcer, virucide, antithyroid, cerebroprotective, anorectic, cc diseful in the treatment, or as a vaccine in the prevention are cc wound healing disorders, infection, atherosclerosis, Parkinson's disease cand Alzheimer's disease, autoimmune disorder, haematopoietic disorders and cc ardiovascular disorders, nervous system related disorders and cc diviperproliferation, systemic autoimmune disease, hyper-immunity, cc developmental abnormality, gastrointestinal ulceration, thyroid cardiovascular diseases, merabolic diseases, byter remunity, con ephoto-cc disorders e.g. hypothyroidism, brain damages, colitis, cone photo-cc disorders e.g. hypothyroidism, brain damages, colitis, cone photo-cc dransduction deficiency, neurological diseases, stroke, anglogenesis, cc trachea, thymus, lymph node and muscular system, obseity, anorexia, cc growth abnormalities, and alleviation of precocious puberty. The sequences given in records ABP60965-ABP61019 represent novel human cc proteins of the invention
The invention relates to an isolated polypeptide with signal sequences which allow it to be secreted extracellularly or membrane associated. The activity of polypeptides of the invention may be described as, cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropicytostatic, antiparkinsonian, nootropicytostatic, vulnerary, antiparkinsonian, nootropicytostatic, vulnerary, antiparkinsonian, nootropicytostatic, vulnerary, antiparkinsonian, nootropicytostatic, vulnerary, antiparkinsonian, nootropicytostatic, antiparkinsonian, nootropicytostatic, vulnerary, antiparkinsonian, nootropicytostatic, antiparkinsonian, nootropicytostatic, antiparkinsonian, nootropicytostatic, antiparkinsonian, nootropicytostatic, antiparkinsonian, nootropicytostatic, antiparkinsonian, nootropicytostatic, antiparkinsonian, nootropicytostatic, antiparkinsonian, nootropicytostatic, antiparkinsonian, nootropicytostatic, no otropicytostatic,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1(a); Page 315; 335pp; English

```
The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel comprehences. Also claimed is a polypeptide encoded by the polynucleotide or its partial peptide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide competitive of the polynucleotide by contacting the polypeptide or peptide competitive with the antibody of the encoded protein, and observing the binding compressible manner and an antisense polynucleotide. The oligonucleotide is useful as a primer for synthesising the polynucleotide or as a probe competitive and an antisense polynucleotide. The oligonucleotide genes may be included in them, for developing a diagnostic marker or competitive for regulation of their expression and activity, or as targets of gene therapy. The genes are involved in tissue and/or cell conscription-related proteins, disease-related proteins and genes are conding them can be used as indicators for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours, The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The sequence presented is a protein of the invention. Note: Some of the sequence data for this patent is not represented in the printed consciplination, but is based on sequence information supplied by the consideration of fice.
                                                                                                                                                                                                                                                                                                                                                                      Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC The invention relates to an isolated polypeptide with signal sequences charlow it to be secreted extracellularly or membrane associated. The cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropic, consupportective, immunosuppressive, haemostatic, antiinflammatory, condition may be described as, conceptor cardiant, antiulcer, vinucide, antithyroid, cerebroprotective, anorectic, cand metabolic. Polypeptides and polynucleotides of the invention are communicated, antithyroid, cerebroprotective, anorectic, cand metabolic. Polypeptides and polynucleotides of the invention are communicated as a vaccine in the prevention of, cancer, condition and the invention are a vaccine in the prevention of, cancer, condition and labelmer's disease, autoimmune disorder, haematopoletic disorder, and Alzheimer's disease, autoimmune disorder, haematopoletic disorder, cardiovascular disorders, pancreatitis, respiratory disorders and hyperproliferation, systemic autoimmune disease, hyper-immunity, confidency developmental abnormality, gastrointestinal ulceration, neuropathy, confidency neurological diseases, sperm dysfunction, thyroid disorders e.g. hypothyroidism, brain damages, colitis, cone photoculation deficiency, diseases in the spinal cord, thyroid gland, heart, convilation deficiency, and alleviation of precocious puberty. The covalences given in records ABB60965-ABB61019 represent novel human convention of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to human polypeptides, termed NOVX, and the polymucleotides encoding them. The polypeptides and polymucleotides are useful for diagnosing disease, and screening for potential therapeutic agents. The sequences are useful for treating metabolic disorders, cardiomyopathy, diabetes, hypertension, congenital heart defects, aortic stenosis, atrial septal defect (ASD), atrioventricular canal defect, ductus arteriosus, pulmonary stenosis, subsortic stenosis, ventricular septal defect (VSD), valve diseases, tuberous sclerosis, scleroderma, atherosclerosis, obesity, infectious disease, amorexia, neurodegenerative disorders, Alzheimer's disease, Parkinson's disease, immune disorders, haematopoietic disorders, haemophilia, hypercoagulation, Crohn's disease and cancer. Sequences ABU54542-ABU54647 represent human NOVX polypeptides

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to novel drug metabolising enzymes (DME) and the nucleotide sequences which encode them. The invention may be useful for the development of compounds with a cytostatic, immunosuppressive, antiinflammatory, endocrine, ophthalmological, gastrointestinal or hepatotropic activity acting as an agonist or antagonist of drug metabolising enzyme activity. The invention may be used in the diagnosis and treatment of disorders associated with decreased or increased expression or activity of drug metabolising enzymes. Such disorders include cancer, cell proliferative disorders, autoimmune/inflammatory, endocrine, eye, gastrointestinal (including liver disorders) and metabolic disorders. The present sequence is that of a human drug metabolising enzyme (DME) of the invention. Note: This sequence did not form part of the printed specification but was obtained in electronic form part of the printed specification but was obtained in electronic format from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a polypeptide-human carboxylatase-24.64, the polynucleotide for coding it, the process for preparing the polypeptide by DNA recombination, the application of the polypeptide in treating diseases such as primary hypertension, digestive ulcer, nephrotic, bronchial asthma, tremor, etc, the antagon of the polypeptide and its medical action, and the application of the polynucleotide are new. The present sequence represents human carboxylatase 24.64.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activiny, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; cytokine; cell proliferation; cell differentiation; gene the vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  disease, such as organophosphorus intoxication, cancer and osteoporosis. CC Compounds that increase the ability of human carboxylesterase-like enzyme to bind to organophosphorus compounds are useful as detoxifying agents. CC Carboxylesterase-like enzyme agonists and antagonists are useful for creating osteoporosis, Paget's disease and degradation of bone implants. Carboxylesterase-like enzyme is useful in cc diagnostic assays for detecting diseases and abnormalities or cc susceptibility to diseases or abnormalities related to the presence of mutations in the nucleic acid sequences which encode the enzyme. The cc coding sequence of carboxylesterase-like enzyme polynucleotide is useful in gene therapy and for generating antisense oligonucleotides or cribozymes which specifically bind to mRNA transcribed from carboxylesterase-like enzyme gene expression. The useful for modulating carboxylesterase-like enzyme gene expression. The gresent sequence is human carboxylesterase-like enzyme gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                                 გ
                                                                                                                                                                                                                                                                                                                                                   polypeptides. The polynucleotides and polypeptides are useful for treating inflammatory conditions such as arthritis, nephritis, Crohn's CC disease, ischaemia-reperfusion injury, shock, sepsis, immune responses and cancer and for promoting wound healing. The sequences are used to induce the proliferation of neural cells and regeneration of nerve and control tissue, and are useful for the treatment of central and peripheral controls. The sequences are involved in chemotactic or chemokinetic extivity, regulation of haematopoises, treatment of myeloid or lymphoid contivity, regulation of haematopoises, treatment of myeloid or lymphoid cregeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth, tissue repair, healing of burns, inclisions, ulcers, treatment of osteoporosis, osteoarthritis, bone degenerative disorders and periodontal conferences of the invention are also useful for gut conditions, autoimmune disorders immune deficiency (SCID), bacterial or fungal conditions such as atthma, thrombolysis or thrombosis and conditions such as atthma, thrombolysis or thrombosis conditions such as atthma, thrombolysis or thrombosis conditions such as atthma, thrombolysis or thrombosis conditions of the invention
                                                                                                                                                                                                                                                                              Query Match

                                                                                     09-AUG-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The present sequence is a peptide encoded by on such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
              The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ន្តន្តន្តន្តន្តន្ត
  ABA21:35-ABA41305). The present sequence is a protein encoded by one succession in a sample derived from human heart (se probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. It is measuring gene expression, the probes are useful for predicting, measuring sene expression, the probes are useful for predicting, human heart and vascular system e.g. cardiovascular diseases of the hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fifty. Wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Protein #3077
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ABB21078
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      23-JAN-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABB21078 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 49

                                                                                                                                                                                                                                                                                                                                  probes which are derived from genomic sequences expressed in the bone marrow. They can be used to measure gene expression in bon samples, which may enable the improved diagnosis and treatment such as lymphoma, leukaemia and myeloma. The present sequence i protein encoded by one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               04-FEB-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholasterolaemia which is associated with coronary heart disease. ABG47348-ABG5930 represent human liver single exon encoded peptides of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 04-FEB-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (see AA100010-AA110067). The present sequence is a peptide encoded by one a human breast sample, where the probe hybridises at high stringency to a predicting, diagnosing, yrading, straying human gene expression in nucleic acid expressed in the human breast. The probes are useful for diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, particularly those diseases with polygenic inflammatory diseases of the breast fibrovystic changes, proliferative breast disease and non-carcinoma tumours. Note: The sequence data for obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 49

                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               mutations in the nucleic acid sequences which encode the enzyme. The coding sequence of carboxylesterase-like enzyme polynucleotide is useful in gene therapy and for generating antisense oligonucleotides or ribozymes which specifically bind to mRNA transcribed from carboxylesterase-like enzyme DNA. These antisense oligonucleotides are useful for modulating carboxylesterase-like enzyme gene expression. The present sequence is carboxylesterase type-B serine peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      disease, such as organophosphorus intoxication, cancer and osteoporosis. Compounds that increase the ability of human carboxylesterase-like enzyme to bind to organophosphorus compounds are useful as detoxifying agents. Carboxylesterase-like enzyme agonists and antagonists are useful for treating osteoporosis, Paget's disease and degradation of bone implants, particularly dental implants. Carboxylesterase-like enzyme is useful in diagnostic assays for detecting diseases and abnormalities or susceptibility to diseases or abnormalities related to the presence of susceptibility to diseases or abnormalities related to the presence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polypeptide. Carboxylesterase-like enzyme and its DNA are useful for screening for agents which decrease or modulate the activity of carboxylesterase-like enzyme polypeptide. Carboxylesterase-like enzyme is useful for treating a carboxylesterase-like enzyme dysfunction related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel human carboxylesterase-like enzyme polypeptide, regulators of which are useful for preventing and treating organophosphorus intoxication, cancer and osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Carboxylesterase-like enzyme; organophosphorus intoxication; enzyme; osteopathic; gene therapy; osteopathic; entisense therapy; cytostatic; detoxifying agent; Paget's disease; bone implant degradation; cancer; dental implant; gene expression; carboxylesterase type-B serine.

The present sequence represents a cat cauxin protein (I) or its salt, which is cat kidney disease marker. Also described: (I) a partial peptide (II) of (I); (2) a nucleic acid (III) encoding (I) or (II); (3) a vector (IV) comprising (III); (4) a transformed host (V) comprising (III) or (IV) comprising (III) or (IV) y (5) producing (I) or (II) by culturing (V); (6) a antibody (VI) or (IV); (5) producing (I) or (II) by culturing (V); (6) a antibody (VI) or (IV); (7) disease which involves measuring (I) quantitatively, and where reduction of amount of (I) indicates presence of the disease; (8) a cat kidney (C) disease diagnostic agent comprising (I) labeling agent, a reagent which compares the biological activity of urinary (I) or (VI); and (9) a cauxin of election kit which measures cauxin in a test sample. (I) is useful as a couxin of the disease in the biological activity of useful for diagnosing cat kidney disease election of cat kidney disease simply and correctly. (I) provides an early marker for the disease, and replaces complicated diagnostic methods such as X-ray imaging, ultrasonic imaging, compared the string of the disease.
                                                                                                                                                                                                                Sequence 542 AA;
